INCUBATION CAFE & DESIGN SPRINT

Idea Brief: A World of Designers

I wanted to create a shared online space for our class projects. I imagined each project as its own small world in a larger universe. The space theme represents how every student has a different idea and way of working, while still being part of one group.

What visitors can do

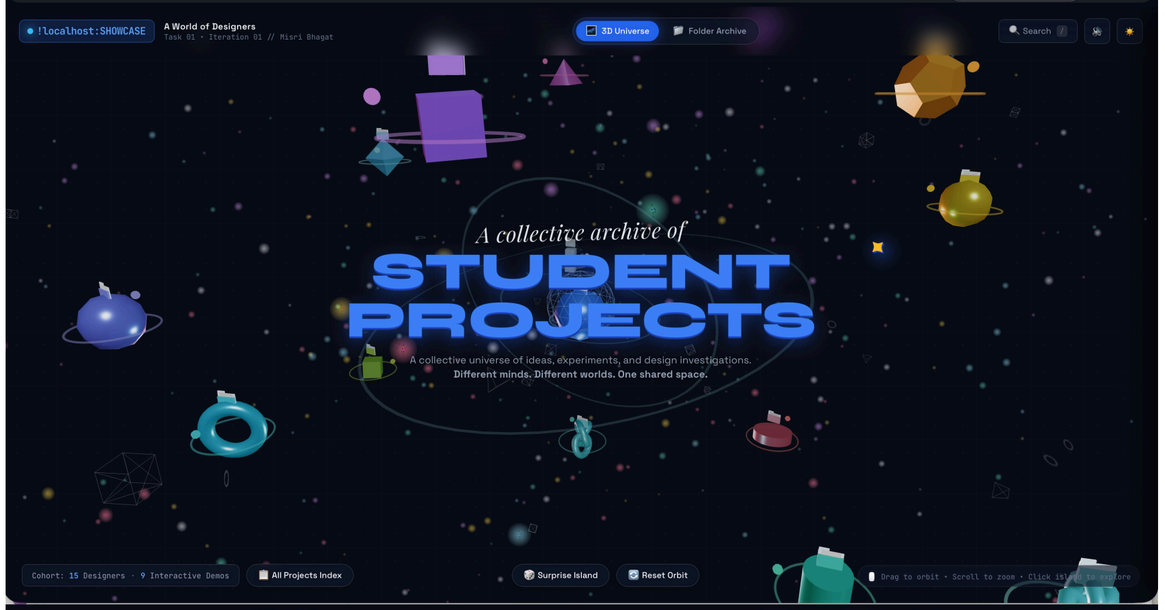

Visitors can explore the projects in two ways. In the 3D Universe, they can drag to move around, scroll to zoom, and click an island to open a project. They can also use the Surprise Island button to visit a project at random.

The Folder Archive gives visitors a more direct way to browse the projects. They can search the project list, open the All Projects Index, and switch between the archive and 3D views. The site also has sound and theme controls.

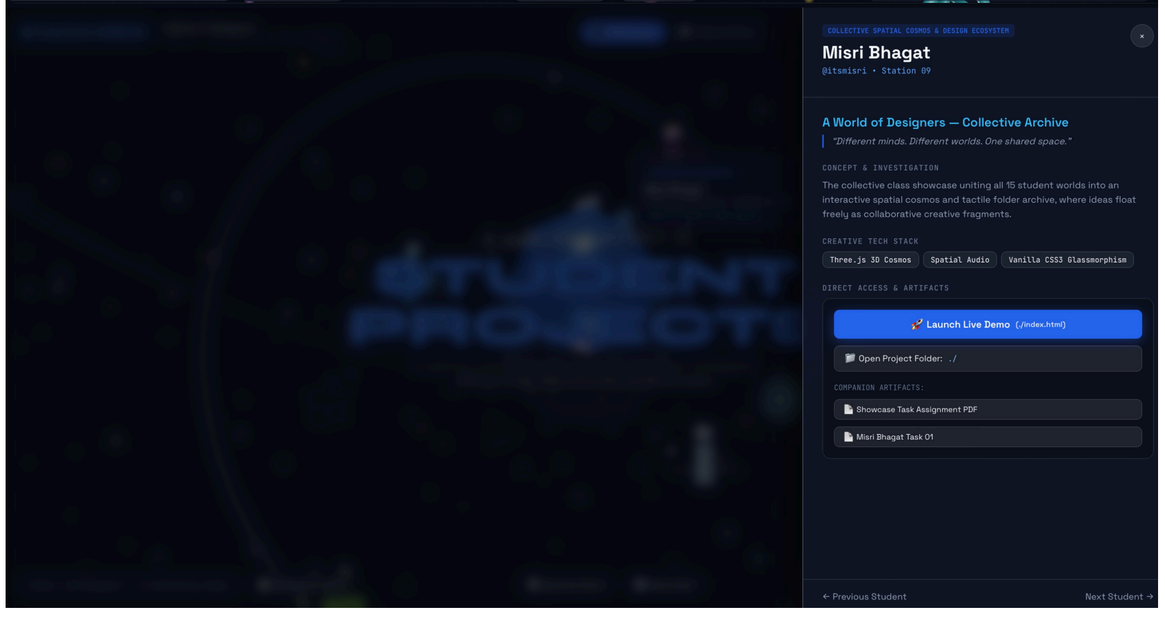

What I changed after trying it

While trying the 3D view, I realised that visitors might not know how to move around or find a project. I added short instructions on the screen and included the Folder Archive and project index as easier ways to browse. I also added the Reset Orbit button so visitors can return to the main view if they get lost.

These changes let visitors choose how they want to explore: they can move through the 3D space or use the more familiar project list.
